

# **TECHNICAL SKILLS ASSESSMENTS**

# For Electrical Maintenance Engineers

# **OVERVIEW**

A process has been developed to provide an assessment of electrical maintenance personnel competencies across key skill areas: electrical principles and practices, motor control circuits, electro-pneumatics, diagnostics and fault finding. This activity will provide objective assessment data where candidates current technical skills, knowledge and behaviours are required to be assessed for recruitment, development or benchmarking purposes.

# **PROGRAMME BENEFITS**

- The skill assessment service provides an impartial process to benchmark engineers competencies to enable appropriate training and development plans to be implemented.
- Individual engineer assessment reports are generated on completion. These clearly identify current capabilities and highlight areas for development in their skills and knowledge. A group summary report is provided for comparison of individual competences, recognition of whole group capability and indicates potential critical points of weakness.
- MGTS is able to provide support and guidance in establishing a training and development plan if desired.

THE ACTIVITY WILL COVER THE **FOLLOWING FOUR DEVELOPMENT NEEDS ANALYSIS [DNA] ASSESSMENTS:** 

# Theoretical
